

Container Tracking

Do You Know Where Your Container Is?
Use intelligent automation to track
shipments from supplier to manufacturer

The ability to track container shipments from supplier to manufacturer is limited, time-intensive and often relies on outdated and expensive technology. [Not anymore.](#)

Container Tracking gives manufacturers more visibility into the supply chain by automating manual and time-intensive processes and streamlining supplier communication.

[With Container Tracking, manufacturers can:](#)

- Make better business decisions based on real-time updates
- Track shipments and containers daily and check location status
- Scorecard shipping and freight forwarding companies
- Eliminate manual processes
- Check near real-time analytics and reports with Power BI

[What if something happens unexpectedly during transit and you need to hold or expedite your shipment?](#)

Container Tracking gives organizations the power to not only track containers with real-time shipment monitoring via geo-tracking and EDI messaging, but also the ability to reroute shipments to meet the most pressing demands.

Key Features of Container Tracking

- Integrate with Dynamics 365 Finance or any ERP system
- Analyze on-time performance of shipping/ freight forwarding companies
- Determine best route optimization based on various inputs
- Adjust and align transportation to meet demand curve

About the Solution

Container Tracking enables manufacturers to gain the visibility they need about the status of their containers around the world - as well as the ability to change course along the way in near real time, including holding or expediting shipments due to unexpected changes.

Why Do You Need Container Tracking?

Customers in a global supply chain ordering a finished product or part from across the sea know there are often windows with little to no information about where that container is or its status. What if something happens unexpectedly during transit and you need to hold or expedite your shipment?

Container Tracking gives organizations the power to not only track containers with real-time shipment monitoring via geo-tracking and EDI messaging, but also the ability to reroute shipments to meet the most pressing demands.

How it Works:

1. Supplier loads container and signals pickup
2. Freight forwarder takes possession and seals container
3. Places container on transportation carrier
4. Container arrives at dock, unloaded, clears customs
5. Container in transport to end customer
6. Container arrives at destination

ABOUT MCA CONNECT

A key differentiator in working with MCA Connect to implement business solutions is our tight industry focus and wide set of service offerings. Our deep knowledge of both the product and your industry enables us to find hidden opportunities only made possible through things like proprietary extensions and industry accelerators to fast track your results.
